Pizza & Spaghetti

Pizza & Spaghetti is a small ERP application for the management of pizza retail outlets with door-to-door delivery by pony express.

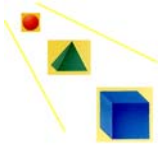

The first important feature of this application is that it allows the customer to order staying at home and using the Web.

A simple interface visualizes the different available products: you can surf on the page having the opportunity to see details and options.

The shopping list can be made simply by an operation of drag and drop concerning the selected items.

The order will be then completed selecting the time of deliver, compatibly with the amount of work of the pizza-shop, and sending the request.

The screenshot shows the web application interface for "Pizza & Spaghetti". At the top, there is a navigation bar with the IST logo, the text "IST - Information System Technology" and the slogan "Your bussinnes, our passions." Below this are several menu items: "Presentazione", "Dati base", "Anagrafiche", "Gestionale", and "Menu". The main content area is divided into several sections. The first section contains five images: a pizza in an oven, a glass of wine, a chef, a cup of coffee, and a bowl of spaghetti. The second section contains four images: a woman in a red dress, a pig, a storefront, and a basket of vegetables. The third section is a green-bordered box containing a small image of a pizza and the text "P.Mediterranea". The fourth section is a red-bordered box containing a shopping list with items and prices: Coca Cola 1.5, Lattina Fanta 1.0, Girasole 5.0, 4 Stagioni 11.0, and Prosciutto 10. A red bar at the bottom of this section displays "TOTALE : 31.0". Below the shopping list is a dashed box containing an image of a glass of water. At the bottom of the page, there is a status bar with the text "Intranet locale".

IST - Information System Technology

With this application is it possible to personalize all the variables that are involved. This makes extremely flexible and diversified the use of the application itself.

Different problems regarding the whole cycle are managed: Items and list, Customers, Suppliers, Stores, Centres of work and their relative loads, Orders, Statistics, Statements of account.

The use of the application can be extended also for the management of popular feasts: (Beer Fest,...)

Through location provided with touch screen orders are gathered and consequently are managed all the resulting activities:

- Cash desk management
- Orders for the different centres: kitchen, pizza-shop, bar, ...
- Course delivery.

Another field of application is represented by the informatic management of menu in restaurants, bar.

Through tablepc or handheldpc which are used both directly by the customer and by the staff, it is possible to manage the whole cycle of activity and to supply further services:

- Electronic bulletin board for messages
- Offers,
- different requests
- Advertisement.
